

MarketMind Strategy Agent

Curated RAG, Marketing Playbooks, and an Approved 12-Week Plan

من ملف اليزنس المؤكد إلى استراتيجية تسويق مبنية على معرفة موثوقة

WHAT THIS REPORT EXPLAINS

What we store, what RAG searches, how playbooks become a custom Strategy, and how the owner stays in control.

First: separate these four concepts

Most confusion disappears once we know what is exact data, what is a rule, what is reusable knowledge, and what is a custom decision.

ONE SENTENCE

MarketMind reads the complete Business Profile, enforces the rules, searches the relevant playbooks, and then creates one Strategy for the owner to approve.

الملف حقائق، القواعد إلزامية، وإل Playbooks معرفة، والاستراتيجية قرار مخصص

The real MarketMind Business Profile

It is not a short name-and-budget form. Discovery creates a rich, evidence-aware, owner-confirmed profile version.

IDENTITY

Business, type, city, area

OFFER

Core offers, best sellers, price, occasions

CUSTOMERS

Segments, needs, peak periods, occasions

DIFFERENTIATION

Strengths, choice reasons, proof points

CURRENT MARKETING

Channels, activities, delivery, assets

GOALS + LIMITS

Goals, timeframe, budget, capacity, constraints

EVIDENCE AND DECISION QUALITY

- Competitor landscape with source references
- Local-demand and digital-presence signals
- Accepted research observations
- Uncertainties that are still unresolved
- Owner goals and Strategy-relevant notes

IMPORTANT

The complete confirmed profile is read directly from PostgreSQL. Strategy never relies on vector search to recover an exact budget, constraint, uncertainty, or owner-confirmed fact.

RAG searches knowledge - not the profile

ال RAG بيدور في المعرفة

A single profile is exact product state. The marketing library is a growing corpus that needs semantic search.

WHY WE DO NOT EMBED THE PROFILE IN V1

NO OMISSIONS

Top-k retrieval could miss a critical fact.

NO STALE COPY

PostgreSQL already owns immutable versions.

NO LEAKAGE

Shared vectors must not mix private businesses.

NO FAKE COMPLEXITY

One bounded JSON object does not need search.

Reusable recipe versus custom decision

الـ Playbook وصفة، والاستراتيجية قرار

We ingest reusable guidance. The Strategy Agent creates the business-specific answer after retrieval.

PLAYBOOK

How to choose channels for a local conversion objective

- Reusable across many businesses
- Explains good-fit and poor-fit conditions
- Lists required assets, capacity, and measurement
- Contains reviewed sources and validity dates

INGEST THIS

STRATEGY

Koshary Corner should focus on lunch-time conversion for 12 weeks

- Created for one confirmed profile version
- Chooses one objective and a focused channel mix
- Applies owner budget and team constraints
- Must be reviewed and approved as a whole version

GENERATE THIS

DO NOT REVERSE THEM

If we ingest AI-generated client strategies as truth, one weak plan can contaminate future plans. V1 ingests reviewed methods, not generated answers.

What we are actually going to ingest

The first corpus is a small reviewed MarketMind marketing handbook. Coverage and quality matter more than document count.

FOUNDATIONS

5Cs, SWOT, STP, positioning, 7Ps, SMART, funnel

OBJECTIVES

Awareness, acquisition, conversion, retention, launch

CHANNELS

Facebook, Instagram, TikTok, Maps, website, delivery

CONTENT STRATEGY

Pillars, themes, formats, cadence, experiments

BUDGET

Organic-only and conservative/base/growth methods

MEASUREMENT

Baselines, owner targets, improvement, benchmark rules

EGYPT / MENA

Language, tone, culture, reviewed seasonality

SECTORS

Retail, hospitality, services, education, healthcare

POLICY + EVIDENCE

Sources, expiry, approval, compliance, benchmarks

Initial source pack: reviewed Markdown under Docs/marketing-knowledge/, with metadata, citations, reviewer, effective date, and expiry where needed.

What one useful playbook looks like

شكل ال Playbook المفيد

A playbook is structured guidance with conditions and evidence, not a vague paragraph copied from the internet.

EXAMPLE

Instagram for a local food business

USE WHEN	The audience is active there and the business has repeatable visual assets.
AVOID WHEN	The team cannot sustain visual production or respond to inquiries.
OBJECTIVES	Awareness, consideration, and selected conversion paths.
NEEDS	Photos/video, response capacity, clear ordering path, measurement.
MEASURE	Profile visits, order-path clicks, qualified inquiries, attributed orders.
RISKS	Vanity metrics, inconsistent cadence, unclear attribution.

METADATA MAKES RETRIEVAL SAFE

KIND	channel_playbook
MARKET	Egypt / MENA / global
SECTOR	hospitality + local SME
OBJECTIVE	awareness / conversion
CHANNEL	instagram
EVIDENCE	reviewed_playbook
STATUS	approved
VALIDITY	effective and expiry dates
SOURCE	reviewed references

What we refuse to ingest

Curated RAG is useful because the team controls what becomes trusted knowledge.

مش أي ملف يدخل المكتبة

ALLOWED AFTER REVIEW

- Marketing frameworks with clear use conditions
- Channel, budget, measurement, and sector playbooks
- Official platform guidance with review dates
- Current sourced benchmarks with expiry
- Egypt/MENA context that has a traceable source

EXCLUDED IN V1

- Generated client strategies or unreviewed AI output
- Random blogs and unsupported market statistics
- Private Business Profiles from other companies
- Copied competitor strategies or finished content
- Expired platform, compliance, or seasonal claims

KNOWLEDGE LIFECYCLE

How a reviewed document enters RAG

من مستند مراجع إلى Vector

Ingestion turns an approved source into traceable chunks and vectors. It is not the same as uploading a PDF and hoping for the best.

CHUNKING EXAMPLE

Do not split a useful idea from its conditions or citation.

Chunk: Instagram is useful for conversion only when the business has a measurable order path and enough response capacity. Source: reviewed channel guide.

IDEMPOTENT AND REPRODUCIBLE

- Stable entry, version, chunk, and Qdrant point IDs
- Checksums prevent duplicate unchanged ingestion
- Provider/model/dimensions stored with every chunk
- Model change creates a new collection and full re-index
- Partial indexing fails visibly and produces a run report

How the Strategy Agent searches the library

بحث بالمعنى مع فلاتر واضحة

The profile builds focused queries. Metadata filters remove unsafe knowledge before semantic similarity ranks candidates.

Koshary Corner: profile to retrieved knowledge

مثال كامل وبسيط

This example shows what RAG contributes. All business details and scores remain illustrative.

WHAT STRATEGY CAN NOW EXPLAIN

Why conversion is the focus, why two channels are enough, what production rhythm the team can sustain, what must be measured first, and which sources support each recommendation.

ال RAG لا يختار مكان صاحب البيزنس، لكنه يجيب المعرفة المناسبة للقرار

PostgreSQL versus Qdrant

كل قاعدة بيانات لها وظيفة

They work together, but they do not store the same kind of truth.

POSTGRESQL - SOURCE OF TRUTH

- Confirmed Business Profile versions
- Strategy Briefs, plans, versions, and owner decisions
- Knowledge entries, approval, sources, and expiry
- Canonical chunks and ingestion runs
- Persisted retrieval packs and citations

MUST SURVIVE

QDRANT - DERIVED SEARCH INDEX

- One vector point per approved knowledge chunk
- Searchable payload tags and validity metadata
- Semantic top-k retrieval after hard filters
- No Business Profiles in the shared collection
- Safe to delete and rebuild from PostgreSQL

REBUILDABLE

FAILURE RULE

If Qdrant or retrieval fails, Strategy generation stops or retries. It does not silently use model memory. Existing approved Strategy versions remain available from PostgreSQL.

The marketing method, in plain language

نفهم، نختار، ننفذ، ونقيس

Frameworks are decision tools. The agent retrieves and applies only what helps the current case.

Adaptive rule: PESTEL, full 7Ps, and specialist methods appear only when relevant and supported by approved knowledge.

Channel scoring and the 2 + 1 rule

قنوات أقل وتركيز أقوى

The score is deterministic. RAG supplies relevant guidance; the model explains the result but cannot change the numbers.

ILLUSTRATIVE KOSHARY SCORECARD

	OBJECTIVE	AUDIENCE	PRESENCE	ASSETS	CAPACITY	BUDGET	EVIDENCE	MEASURE	
Instagram	11	12	9	11	10	9	10	10	82
PRIMARY									
Facebook	10	11	11	8	11	9	10	9	79
PRIMARY									
TikTok	8	10	4	9	6	7	8	6	58
SUPPORT									

Illustrative scores only. Real weights and inputs are versioned rules, not RAG content.

2 + 1

Maximum focus

- Two primary channels receive sustained effort.
- One supporting channel is a bounded test.
- Capacity and measurement can veto popularity.
- Paid tactics disappear when the owner disallows paid media.

Why this matters: a small SME learns faster from a focused, sustainable plan than from being told to post everywhere.

Roadmap, budget, and KPIs

خطة قابلة للتنفيذ والقياس

Strategy defines the direction and learning system. Content creation and real spending remain separate approved actions.

12-WEEK ROADMAP

EXTERNAL BUDGET MODES

KPI TARGET MODES

System architecture and agent boundaries ال RAG خدمة مشتركة، مش Agent جديد

RAG is shared infrastructure. It is not a new agent and it does not replace Discovery or Research.

AGENT BOUNDARIES

How we prove the RAG is real and useful

ثبت إن ال RAG مفيد فعلا

Qdrant existing is not success. The team must demonstrate correct retrieval, grounded output, visible failure, and owner control.

RAG ACCEPTANCE

- At least 25 reviewed queries across five SME sectors
- Expected source in top five for at least 80% of cases
- No unapproved or expired knowledge passes filters
- Every numeric benchmark claim has a verified citation
- Empty retrieval stops unsupported generation

OWNER CONTROL

- Draft shows sources, assumptions, gaps, and blockers
- Owner can approve, request revision, or reject
- Revision creates a new immutable Strategy version
- Publishing and paid execution remain separate actions
- Profile changes mark older plans as outdated

SPRINT 4 - REQUIRED NOW

CURATED KNOWLEDGE SEED

POSTGRESQL GOVERNANCE

QDRANT LOCAL SERVICE

INGESTION + RETRIEVAL

STRATEGY GENERATION

EVIDENCE-VISIBLE UI

EVALUATION SUITE

LATER

- Knowledge admin UI
- Live Research Agent ingestion
- Private uploaded-document RAG
- Hybrid search and reranking if evaluation needs it
- Historical Strategy case retrieval

Meeting decision: approve curated RAG as part of the Strategy v1 vertical slice.
